

Performance Testing

Date	28 June2026
Team ID	xxxxxx
Project Name	Credit Card Approval
Maximum Marks	5 Marks

Performance Testing

Step 1: Testing Overview

Field	Details
Testing Tool Used	Web Browser (Google Chrome) / Flask Development Server
Type of Testing	Functional Testing
Target Module / API	Credit Card Approval Prediction System
Test Environment	Windows 10/11, Python 3.x, Flask, Visual Studio Code
Test Date	28 June 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	Test Input	Expected Outcome	Actual Outcome	Status
1	Verify application home page	Open application in browser	Home page loads successfully	Home page displayed successfully	Pass
2	Submit valid applicant details	Valid applicant information	Prediction is generated	Prediction displayed correctly	Pass
3	Submit invalid/incomplete details	Missing or incorrect inputs	Validation message displayed	Validation handled correctly	Pass
4	Verify approved prediction	Eligible applicant details	Application should be approved	Approval result displayed	Pass
5	Verify rejected prediction	Ineligible applicant details	Application should be rejected	Rejection result displayed	Pass
6	Display prediction confidence	Valid applicant details	Confidence score displayed	Confidence score shown correctly	Pass

Step 3: Performance Test Results

S.No	Test Case	Expected Result	Actual Result	Status	Remarks
1	Home Page Loading	Application loads successfully	Loaded successfully	Pass	No issues found
2	Applicant Data Submission	Data accepted successfully	Accepted successfully	Pass	Working correctly
3	Credit Card Prediction	Predict Approved/Rejected	Prediction generated successfully	Pass	Accurate prediction
4	Result Display	Display prediction with confidence	Result displayed correctly	Pass	User-friendly output
5	Input Validation	Handle invalid inputs	Validation messages displayed	Pass	Input validation successful
6	Application Stability	Runs without errors	No runtime errors observed	Pass	Stable performance

Step 4: Observations & Analysis

- The application successfully accepted applicant details through the web interface.
- The Random Forest model generated credit card approval predictions accurately.
- The system displayed Approved or Rejected along with the confidence score.
- Input validation worked correctly for user-provided data.
- The Flask application ran smoothly without runtime errors.
- The overall system was stable, responsive, and easy to use.
