

Coding & Solution

Date	28 June 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Coding & Solution

Solution Summary

Field	Details
Repository Link / URL	https://github.com/243ta04037-induja/Credit_Card_Approval_Prediction
Programming Language(s)	Python, HTML, CSS
Framework(s) Used	Flask
Key Features Implemented	• Credit Card Approval Prediction using Random Forest • User-friendly web interface • Real-time Approval/Rejection Prediction • Confidence Score Display • Data Preprocessing using Pandas & NumPy • Model Loading using Pickle
Pending / Incomplete Features	• User Login & Authentication • Database Integration • Cloud Deployment
Setup / Run Instructions	1. Install required libraries. 2. Run app.py. 3. Open http://127.0.0.1:5000. 4. Enter applicant details. 5. Click Predict Approval.

Code Quality Checklist

S.No	Criteria	Status (Yes/No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Partial
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The project is developed using a modular architecture with separate frontend, backend, machine learning model, and dataset files. The Random Forest model provides fast and accurate credit card approval predictions through a Flask-based web application.
